

# TERRA-HAMMER T 105 F

## Backyardcrossing in Bernese Oberland

Swiss made 

## Protective pipe installation with short pipes out of a basement

TERRA-HAMMER T 105 F

Pic 1: Installation of the piercing tool and the short pipes in the basement before starting the machine.

Pic 2: The oversized end sleeve expands the bore channel to 130 mm.

The company Gerber + Troxler Bau AG from the Bernese Oberland is rehabilitating the drinking water system. For the trenchless installations, especially house connections, the new piercing tool TERRA-HAMMER T 105 F was used. With the oversized end sleeve the 105 mm machine also allows pulling in of bigger pipes as in this case a 112 mm short pipe. The piercing tool was set up in the natural stone masonry within the basement. From there it drilled and installed simultaneously the protective pipes underneath the 7 m backyard. Into these protective pipes will then be installed the product pipe.

Pic 3: The T 105 F reaches the target with precision and at ease.
